

Synthesis of phenanthrenequinon push –pull systems

M. A. AL-Eid , and Graeme Cooke

School Of Chemistry, University Of Glasgow,

Scotland G12 8QQ, SCPOC

A series of push-pull chromophores have been synthesised from phenanthrenequinone (PQ) using [2+2] Cycloaddition reaction. These compounds have been characterized using IR, ¹H NMR, UV-VIS spectroscopes, X-ray crystallography and cyclic voltammetry.
